

BE-Algebra 1

Thursday 8-27-09

Simplify, EVALUATE if $x = \frac{1}{2}$, $y = -1$

$$\textcircled{1} \quad 6(3x + 2y - y) + 4(\overbrace{-2x - 1}) + 3$$

$$6(3x + 2y - y) + 4(\overbrace{-2x - 1}) + 3$$

$$6(\overbrace{3x + y}) - 8x - 4 + 3$$

$$\underline{18x + 6y} - \underline{8x} - 1$$

$$\boxed{10x + 6y - 1} \quad \text{if } x = \frac{1}{2}$$

$$y = -1$$

$$10\left(\frac{1}{2}\right) + 6(-1) - 1$$

$$5 - 6 - 1 = \boxed{-2}$$
