

4-5 Study Guide and Intervention *(continued)***Graphing Linear Equations**

Graph Linear Equations The graph of a linear equation is a line. The line represents all solutions to the linear equation. Also, every ordered pair on this line satisfies the equation.

step #1

Example Graph the equation $y - 2x = 1$.

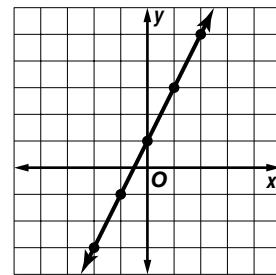

Solve the equation for y .

$$\begin{aligned} y - 2x &= 1 && \text{Original equation} \\ y - 2x + 2x &= 1 + 2x && \text{Add } 2x \text{ to each side.} \\ y &= 2x + 1 && \text{Simplify.} \end{aligned}$$

Select five values for the domain and make a table. Then graph the ordered pairs and draw a line through the points.

step #2

x	$2x + 1$	y	(x, y)
-2	$2(-2) + 1$	-3	(-2, -3)
-1	$2(-1) + 1$	-1	(-1, -1)
0	$2(0) + 1$	1	(0, 1)
1	$2(1) + 1$	3	(1, 3)
2	$2(2) + 1$	5	(2, 5)

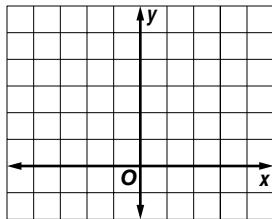

step #3

Exercises

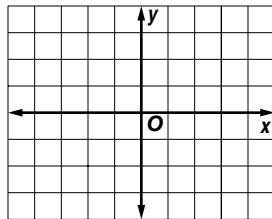

Graph each equation.

For ALL Problems: show your "5 value" tables NEATLY on looseleaf!

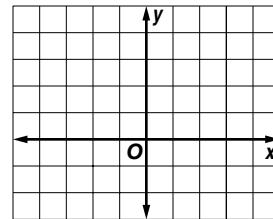

1. $y = 4$

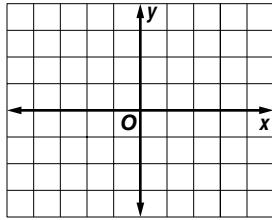

2. $y = 2x$

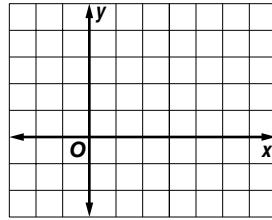

3. $x - y = -1$

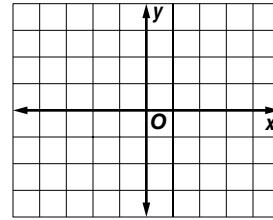

4. $3x + 2y = 6$

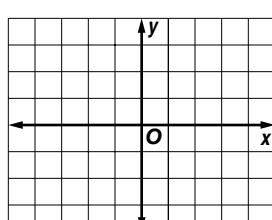

5. $x + 2y = 4$

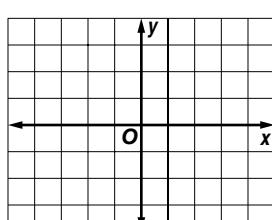

6. $2x + y = -2$

7. $3x - 6y = -3$

8. $-2x + y = -2$

9. $\frac{1}{4}x + \frac{3}{4}y = 6$
